

Snapshot of the output after executing test file inside Inner VM

The screenshot shows a Virtual Machine Manager window titled "Virtual Machine Manager" with a subtitle "ubuntu20.04 on QEMU/KVM". The window displays a terminal window for the inner VM, titled "root@innervm-Standard-PC-Q35-ICH9-2009: /home/innervm/test". The terminal output shows the following commands and results:

```
innervm@innervm-Standard-PC-Q35-ICH9-2009:~$ sudo su
[sudo] password for innervm:
root@innervm-Standard-PC-Q35-ICH9-2009:/home/innervm# cd test
root@innervm-Standard-PC-Q35-ICH9-2009:/home/innervm/test# gcc testfile.c
root@innervm-Standard-PC-Q35-ICH9-2009:/home/innervm/test# ./a.out
CPUID(0x4ffffff), exits=1708822, cycles spent in exit=14494674798
root@innervm-Standard-PC-Q35-ICH9-2009:/home/innervm/test#
```
